

Technologies:

ELDOMINVEST is one of the few European manufacturer of enameled water heaters with a

capacity up to 2,000 liters. Our production line installed in June 2015 is equipped with last generation robots and machines.

- **ENERGY SAVING**

- with two coils - allowing combined use of two heating sources. Significant energy savings can be achieved through an appropriate combination of heating modes during any season. The upper coil works in flow mode and connects to water heater and/or fireplace; the lower coil works in accumulating mode and is suitable for connection to a solar collector or heat pump.
- sensory joints for each heat exchanger - the installation of thermo sensors allows heating system precise control and its energy saving operation;
- thermal insulation of expanded polyurethane foam with a thickness of 100 mm ensures extremely low heat losses and saves money;
- Casing from wear-resistant synthetic fabric in INOX color.
- **LONG LIFE** - the water tank is coated with a wear-resistant zirconium enamel and two magnesium treads for optimum corrosion protection covering the entire volume. The modern technology applied is for liquid enameling suitable for boilers with heat exchangers.
- **SAFE** - with unique protection;
- Circulation coupling;
- Safety valve;
- Three sockets for additional heating elements;
- Thermo-manometer;
- Pressure regulator;
- Electric tube heater specially designed for this model.

Capacity range:	1500
Water tank:	Enameled
Control:	mechanical control
Number of coils:	2
Dimensions ØxH [mm]:	1250 x 2210
Voltage [V]:	400V 3N~
Method of water heating:	Electric heating element + two heat exchangers
Pipes diameter (plumbing system / heat exchanger):	2"/1"
Heat exchanger surface [m2]:	3.04 / 2.03
Standing loss [W]:	161
