

Technologies:

- A unique heat energy accumulator in systems with a drinking water. It provides hot water for a long period of time and there are no heat exchangers in the tank. The buffer tanks provide

convenient ways of connection and control of their multiple technological inlets /sockets/. It can be positioned anywhere.

- ENERGY SAVING - insulation from 125 mm thick CFC-free polyurethane foam to guarantee minimum heat losses;
- LONG LIFE - water tank coated with a wear-proof zirconium enamel and two magnesium protectors for an optimal anti-corrosion protection of the whole volume;
- Sensor socket - with a thermal sensor fitted inside to send data to the heating system;
- Temperature indicator - to report water heating temperature;
- Circulation socket - to provide for hot water supply to each point of consumption, within a three wire system;
- Casing made of a synthetic INOX-coloured wear-proof material;
- Technological flange - a mandatory hole of a larger diameter to provide for an easy access to the water tank.

Capacity range:	1000
Dimensions ØxH [mm]:	1100 x 2020
Water tank:	Enameled
Nominal pressure [MPa]:	0.6
Number of heat exchangers:	-
Standing loss [W]:	131
