

## Technologies:

- A unique heat energy accumulator in drinking water systems. Provides for hot water needs for a long period of time, with no serpentine inside. The buffer vessel allows for convenient ways to connect and control through the number of technological holes /sockets/ and could be installed anywhere.
- The single coil model allows for two simultaneous different heating sources to supply energy to the buffer (for example from the sun and boiler).
- ENERGY SAVING - insulation from 100 mm thick CFC-free polyurethane foam to guarantee

minimum heat losses;

- Sensor socket - with a thermal sensor fitted inside to send data to the heating system control;
- Temperature indicator - to report boiler water heating temperature;
- Casing made of a synthetic INOX-coloured wear-proof material.
- This special purpose tank is non-enameled which particularly makes it unsuitable for hot water sanitary needs.

Capacity range:	<b>1500</b>
Dimensions ØxH [mm]:	<b>1250 x 2210</b>
Water tank:	<b>Non-enameled</b>
Nominal pressure [MPa]:	<b>0.3</b>
Number of heat exchangers:	<b>1</b>
Standing loss [W]:	<b>158</b>
