

Technologies:

This buffer tank model is designed for simultaneous heating of water both for heating and for hygienic household needs. The flow-through heating principle and the large capacity provide a significant quantity of household hot water. The corrugated heat exchanger disposes with a large contact area and is made of so-called medical chrome-nickel steel brand AISI316L. This guarantees the preservation of the potable qualities of the hot water throughout the whole exploitation of the device.

- Minimal heat losses;
- Easy-to-dismantle insulation made of expanded polystyrene with graphite nanoparticles, a thickness of 100mm;
- Coating with a zipper made of synthetic wear-resistant material INOX color;
- Terminals, convenient for installation and service;
- Circulation socket;
- Thermostat sockets;
- Venting plug.

Capacity range:	2000
Dimensions ØxH [mm]:	1400 x 2255
Water tank:	Non-enameled
Nominal pressure [MPa]:	0.3
Number of heat exchangers:	2
Standing loss [W]:	186
