Heat Pump Water Heater 150l., Enameled

Technologies:

ELDOM Green Line Heat Pump Water Heaters are the latest generation “air-water” type with the highest-class of energy efficiency. These models successfully replace the traditional electric water heaters. Model with a heat exchanger for connection to a second energy source. These

models have all the features of the traditional electric water heaters ELDOM but they also offer some significant advantages:

- Over three times less power consumption
- Affordable investment – the costs are refunded through energy economy within its warranty period (up to 2 years)
- Easy replacement of the old electrical water heater due to the identical dimensions
- Japanese electronic thermal valve providing high efficiency of the heat pump even at a low ambient temperature
- Innovative condenser – equipped with an aluminum heat exchanger covering the tank externally with a significant heat exchanging area
- Intelligent electronic control of the highest class incorporated in the water heater
- Temperature heated up to 55C through the air energy. In addition, optional heating of up to 75C by means of an electric heating element

Capacity range:	**150**
Water tank:	**Enameled**
Energy efficiency class:	**A**
Control:	**electronic control**
Weight [kg]:	**32**
Voltage [V]:	**230 V~**
Height x Width x Depth [mm]:	**1420 x 462 x 484**
IP protection:	**IP24**
Number of heat exchangers:	**1**
