Technologies:

When developing the ELDOM Style water heaters we have concentrated our efforts on the balancing of the competitive low price with all of the features and functions, expected from a standard electric household water heater. All of that – without making any compromises with the quality and the reliability of the appliance. The appliance is without a switch

- Stylish design;
- Safe – with unique six-level protection;
- Long life – Dry tubular heating elements offer efficiency comparable to standard immersion heaters. At the same time, because they do not come into direct contact with the water and operate under a lower thermal load, their lifespan is significantly longer.
- Dense HFO insulation;
- Anti-corrosion protection – a magnesium anode protecs the entire water tank volume from the corrosive processes;
- Special elliptic flange, know-how of ELDOMINVEST;
- External capillary thermostat;
- Capillary thermal cut out;
- Combined PBT safety valve “3 in 1” – performing the actions of a balancing, check and differential valve;
- Temperature indicator;
- On / off light indication.

Installation:	**Vertical**
Capacity range:	**80**
Water tank:	**Enameled**
Energy efficiency class:	**C**
Control:	**mechanical control**
Dimensions ØxH [mm]:	**435 x 825**
Voltage [V]:	**230 V~**
IP protection:	**IP24**
Annual electricity consumption [kWh/annum]:	**1423**
Load profile:	**M**
